

Additional information for the product

Health and safety environmental

Used electronic equipment labeled in accordance with the European Union directive, must not be placed together with other municipal waste. It is subject to separate collection and recycling at designated points. By ensuring its proper disposal, you prevent potential negative consequences for the environment and human health. The recycling system complies with locally applicable environmental regulations on waste disposal. Detailed information on this subject can be obtained from the municipal office, the purification plant or the store where the product was purchased.

The product meets the requirements of the directives of the so-called New Approach of the European Union (EU) on issues related to safety of use, health protection and environmental protection, specifying the risks that should be detected and eliminated.

Li-Ion battery

The device is equipped with a LI ION (lithium-ion) battery, which, due to its physical and chemical structure, ages over time and use. The producer specifies the maximum operating time of the device in laboratory conditions, where there are optimal working conditions for the device, and the battery itself is new and fully charged. The working time in reality may differ from that declared in the offer, and this is not a defect of the device but a feature of the product. To maintain maximum battery life, it is not recommended to discharge the battery to less than 3.18 volts or 15% of the total capacity. Lower values, such as 2.5 volts for a cell damage it permanently and this is not covered by the warranty. If you do not use the battery or the entire device for more than one month, charge the battery to 50% and check its charge level periodically every two months. Store the battery and the device in a dry place, away from the sun and negative temperatures.

LIPO battery

The device is equipped with a LI ION (lithium-ion) battery, which, due to its physical and chemical structure, ages over time and use. The producer specifies the maximum operating time of the device in laboratory conditions, where there are optimal working conditions for the device, and the battery itself is new and fully charged. The working time in reality may differ from that declared in the offer, and this is not a defect of the device but a feature of the product. To preserve the maximum life of the battery cells, it is not recommended to discharge the battery to below 3.18 volts for a single cell or 15% of the total capacity. Lower values, such as 2.5 volts for a cell will damage it permanently and this is not covered by the warranty. If you do not use the battery or the entire device for more than one month, charge the battery to 50% and check its charge level periodically every two months. Store the battery and the device in a dry place, away from the sun and negative temperatures.

Maintenance

The product must be regularly maintained (cleaned) by the user himself or by specialised service centres at the user's expense and expense. In the absence of any information on necessary maintenance, cyclical or service actions in the operating instructions, the dissimilarity of the product's physical condition from a physically new product must be assessed regularly at least once a week. If any discrepancy is detected or found, maintenance (cleaning) or service measures must be taken urgently. Failure to properly maintain (clean) and react when a dissimilar condition is detected may result in permanent damage to the product. The guarantor is not liable for damage resulting from negligence.
